Education

Indian Institute of Information Technology, Design and Manufacturing

Bachelor of Technology in Electronics and Communication Engineering

Aug 2019 – May 2023

Jabalpur, Madhya Pradesh

Technical Skills

Languages: Golang (Go), Python, C/C++, JavaScript, SQL

Frameworks: Gin, Gorilla Mux, FastAPI, Flask

Databases & Caches: MongoDB, PostgreSQL, Redis, KeyDB, ScyllaDB

Cloud & DevOps: Google Cloud Platform (GCP), Docker, Kubernetes

Technologies & Tools: Temporal, RabbitMQ, Elasticsearch, Git, GitLab

Experience

Tieto India Private Limited

Software Engineer

Dec 2025 – Present

Bengaluru, Karnataka

- Built Go and Python services for Ericsson Private 5G device lifecycle management, supporting provisioning, configuration, and real-time operations across customer sites.
- Developed Go REST APIs integrating with **NETCONF** for provisioning and configuration of radios, basebands, and IoT devices across distributed customer sites.
- Designed and implemented a **distributed in-memory cache** for device configurations across multiple pods, using **Redis Streams** to propagate cache updates and maintain consistency across nodes.
- Designed an **event-driven pub/sub architecture** across microservices using Redis Streams to deliver status change notifications for site-deployed devices to downstream clients.
- Implemented a unary **gRPC** adapter layer for type-safe, high-performance inter-service communication, replacing HTTP-based calls across internal microservices.

Jio Platforms Limited

Backend Developer

Oct 2023 – Dec 2025

Mumbai, Maharashtra

- Developed and maintained Go and Python microservices supporting content processing and playback for OTT platforms serving **10M+ daily active users**.
- Engineered a scalable content migration pipeline for **200K+** media files from JioCinema to JioHotstar, leveraging **Go worker pools, RabbitMQ, and rate limiting** to automate playback URL updates and enable cross-platform playback.
- Developed concurrent data ingestion pipelines using **goroutines, WaitGroups, and channels** to automate multi-tenant XML processing, increasing **throughput by 5×**.
- Migrated the **Widevine license delivery** service from a third-party provider to an in-house solution, handling license delivery across supported devices and achieving platform-wide coverage.
- Designed a secure DRM key generation system using KDF-based derivation and **Google Cloud KMS**, enabling ephemeral key lifecycles without persistent application-level key storage.
- Developed **Temporal workflows and activities** to process high-bitrate video content, orchestrating transcoding, packaging, and metadata extraction for files **averaging 100GB per workflow**; supported **100+ concurrent workflows at peak** in production with automatic retries and workflow-level observability.
- Owned RESTful APIs for real-time **DRM key generation and rotation** for livestreams on the JioTV platform, enabling secure playback for millions of livestream sessions.
- Implemented the seekbar thumbnail preview feature for video playback on JioTV, serving thumbnails through **Google Cloud Storage** with optimized **Cache-Control headers** to reduce repeated origin fetches.

Awards & Certifications

- Certified Widevine Implementation Partner (CWIP) - Google Widevine
- Jio Platforms Limited - Rising Star Award (2023–2024) for performance and contributions

Feb 2025
